BUSINESS STRATEGY

Dealflow

Tell Claude what you're charging. Dealflow gets you paid. The quote-to-cash back office for freelancers, run by their own Claude, with no AI inside our app.

A freelancer's week

Riya (an illustrative composite) is a freelance brand designer in Bengaluru. On Monday a client says yes to a ₹55,000 logo project on a call. That evening she rebuilds a quote in a Canva template: scope, line items, GST, terms. She sends a PDF on WhatsApp and gets two blue ticks, then silence. She doesn't know if they opened it, agreed or forwarded it to finance. She starts the work anyway, and then spends weeks writing "just checking in" messages she hates sending. She gets paid five weeks later. She already pays for Claude, which could have written every word of that quote and every follow-up, but Claude can't send it, see that it was opened, record a yes, or nudge the client next Tuesday.

Why freelancers first

- **A big, growing market.** About 15M freelancers in India, second only to the US[1]. India's gig workforce is projected to grow from 7.7M (2020–21) to 23.5M by 2029–30[2]. In the US, 64M people (38% of the workforce) freelanced in 2023[3].
- **Getting paid is the core pain.** 61% of Indian freelancers surveyed have gone unpaid at least once, and many wait 2–4 weeks after invoicing[4]. 71% of US freelancers have had trouble collecting payment, and 81% of those were paid late[5].
- **Admin is unpaid time.** Freelancers lose about 204 hours a year to admin and paperwork[6], and the person doing the chasing is the same person who should be doing billable work.
- **One decision-maker who already uses AI.** No procurement process: if it saves a freelancer an evening, they adopt it the same day. Many already pay for Claude.
- **They spread it.** Freelancers recommend tools to each other in communities, and every quote reaches a client business.

Primary: freelancers (designers, developers, writers, marketers, consultants) sending 3–20 quotes a month. **Secondary:** small business owners, such as studios, agencies and consultancies of 2–20 people, with the same workflow at higher volume. Their clients see Dealflow on every quote, which is our path to them.

Why this product, and why not just Claude

1 · CLAUDE WRITES
"Quote Meesho for a logo redesign, ₹40k, half upfront." Scope, items, terms, cover email.

2 · DEALFLOW SENDS
Emailed to the client instantly. Freelancer can edit anything; the link updates live.

3 · CLIENT ACTS
Opens, accepts in one click, or asks for changes. Accepting turns it into an invoice.

4 · UNTIL PAID
Follow-ups on day 3, 7 and 14 stop the moment the client pays.

Claude alone writes well but can't host a quote, track opens, record an acceptance or act after the chat closes. **Invoicing software** can, but makes you fill in forms. Dealflow joins them: the customer's Claude does the thinking and writing, and Dealflow does everything that has to keep happening afterwards, with no AI bill of its own.

Business model

Plan	Price	For
Free	₹0	3 active quotes, "Sent with Dealflow" footer (growth loop)
Pro	₹199 / mo · $5 abroad	Freelancers: unlimited quotes, automatic follow-ups, own branding
Studio	₹599 / mo · $15	Small businesses: up to 5 seats, shared clients, custom link domain

Cost to serve: about ₹18 per paying customer a month (₹8 hosting, ₹4 email, ₹6 subscription billing fees, **₹0 AI**). With a blended ARPU of ₹279, gross margin is about 94%. At a ₹1,500 CAC and 4% monthly churn, LTV:CAC is about 4.4× and payback is about 6 months. Priced below a single late payment's cost, so it's an easy yes. **Later:** payment links with a 0.5% fee on money collected.

Growth

First 100 (about 90 days): founder-led outreach to freelancers in my network with a free month of Pro; build-in-public clips ("Claude wrote this quote, the client accepted in 40 seconds"); Indian design, developer and marketing communities; MCP connector directories; and the "Sent with Dealflow" loop. **Year 1:** 1,000 paying, about ₹33L ARR, payment links and WhatsApp reminders. **Year 3:** 12,000 paying, about ₹4Cr ARR, the receivables layer for freelancers and small businesses in India and South-East Asia.

THE PRODUCT

The working product

Live, free to try, and connected to Claude through MCP. No AI keys anywhere in the app.

What	Link / detail
Live app	`https://dealflow-2vnc.onrender.com`
Demo login	`demo@dealflow.app` / `demo1234` (or sign up for your own account in 20 seconds)
MCP connector (demo account)	`https://dealflow-2vnc.onrender.com/mcp/demo-dealflow-7Qx2pLk9`
Source code	`github.com/sauravanurag111/ClaudeBiz`

Connect it to Claude (about 1 minute)

1. In Claude (claude.ai or desktop): **Settings → Connectors → Add custom connector**.
2. Name it **Dealflow**, paste the MCP URL above, leave the OAuth fields empty, click **Add**.
3. In a new chat, enable Dealflow in the tools menu and ask for a quote. Allow the tool when Claude asks.

The Claude integration: 9 MCP tools

Tool	Claude uses it to…
`create_quote`	Send the quote it wrote (title, scope, line items, tax, discount, payment terms, T&Cs). Dealflow emails it to the client straight away and schedules follow-ups automatically.
`update_quote`	Apply changes ("add a 10% discount", "split the logo into 2 phases").
`send_quote`	Email the client the link, with a message Claude writes.
`schedule_reminders`	Queue a reminder sequence it writes, from polite to firm, with placeholders like `{{amount}}` that Dealflow fills in.
`list_quotes` `get_quote`	Answer "What's unpaid? Did Meesho open it?" with live status, views, acceptance and activity.

`mark_paid`
`archive_quote`
`get_business_profile`
	Close the loop (this cancels pending reminders) and read the sender details.

A typical flow

1. **In Claude:** "Create a Dealflow quote for Anurag at Meesho (anurag@example.com): logo redesign, 3 concepts, 2 revision rounds, ₹40,000, plus brand guidelines ₹15,000, 18% GST, 50% upfront." Claude writes the scope and terms and calls `create_quote`.
2. **In Dealflow:** Q-0001 is already emailed to the client and on the dashboard, with follow-ups scheduled. The freelancer edits a price and adds a line item; totals update live, and the client's link shows the change immediately.
3. **As the client:** open the public link (no login). The dashboard shows "Opened". Click **Accept**: it becomes invoice INV-0001 with payment details. Click **I've paid** with a UTR and a payment screenshot. The dashboard shows "Client marked paid".
4. **Back in Claude:** "What's unpaid?", then "Mark it paid". Pending reminders are cancelled automatically.

Editing experience

Every field Claude writes can be edited in the browser: client details, scope, line items (add, remove, live totals), discount, tax, currency, validity and due dates, payment terms and T&Cs. Reminders can be edited too (send time, subject, body), sent immediately, or deleted. An activity timeline records who did what: Claude, the freelancer or the client.

What is real vs. simulated in v1

REAL MCP server and tools, Postgres storage, owner editing, public client pages, view tracking, acceptance records, quote-to-invoice conversion, reminder scheduler with automatic cancellation, live deployment.
SIMULATED **Payments**: no gateway yet. The invoice shows the freelancer's UPI or bank details, the client clicks "I've paid" and the freelancer confirms. **Email**: real when a Brevo key is configured; otherwise reminders are marked "recorded, email off" in the app. The demo account's payment details are samples.
NEXT Razorpay/Stripe payment links with auto-reconciliation, WhatsApp reminders, OAuth connector, GST-compliant invoice PDFs, team seats.
